SUMMARY

I'm an aspiring AI/ML engineer with hands-on experience building and improving machine learning and deep learning models. I'm skilled in preparing and cleaning data, creating useful features, and evaluating models. I've worked on projects like disease prediction, fashion recommendations, and detecting oral diseases. I have a strong understanding of computer vision, ML algorithms, and data analysis, and I enjoy working in teams to solve challenging problems..

EDUCATION

- **Mehran university of engineering and technology, Jamshoro** Sindh, Pakistan
B.E in Software engineering; CGPA: 2.89 Nov 2021-Nov 2025

EXPERIENCE

- **<https://sapphire.co/>** Jamshoro, Sindh
AI Engineer Intern June 2025- July 2025
During my internship at Sapphire, I worked on developing and optimizing AI/ML models, focusing on data preprocessing, model training, and performance evaluation. I collaborated with the team to implement machine learning solutions and gained hands-on experience with Python, scikit-learn, and deep learning frameworks.
 - **Tech Stack::** Python, Jupyter notebook, Scikit-learn, NumPy, Pandas, Matplotlib, TensorFlow, google colab.
- **<https://www.nbp.com.pk/>** Hyderabad, Sindh
Data analyst intern June 2023- August 2023
Interned at a bank where I supported data handling tasks, including preparing reports, analyzing trends, and organizing operational data. Developed skills in Excel, basic analytics, and understanding of financial workflows.

PROJECTS

- **ChicFemme(AI driven fashion advisor (FYP)):** Developed a system to classify clothing images into categories using Computer Vision and Machine Learning techniques. Implemented CNN-based feature extraction, K-Means for style grouping, and SVM classifiers using Python. The model supports the ChicFemme platform's personalized outfit recommendation feature.)
- **Disease prediction:** Developed a machine learning model in Python to predict diseases from patient symptoms using SVM, Random Forest, and Naive Bayes, achieving high accuracy.
- **Oral disease detector:** Developed a Python-based computer vision system to detect and classify oral diseases from images using CNNs, achieving high accuracy in automated diagnosis.)

CERTIFICATES

- **AWS cloud technical essentials Coursera :**

SKILLS

- * **Technical skills:** python, pandas, numpy, matplotlib, seaborn, jupyter, basic NLP
- * **Soft skills:** Social media management, E-commerce store management, Team collaboration, Problem solving
