SUMMARY

Flutter developer and instructor with hands-on experience building security-first, production-grade mobile applications — including local encryption pipelines, custom media editors, and biometric authentication systems. Currently training university students on Flutter app development and guiding Final Year Projects (FYPs) at Dotcom Metaverse. Comfortable owning a project end-to-end: architecture, state management, backend integration, and security hardening.

EXPERIENCE

Flutter Developer & Instructor

2024 – Present

Dotcom Metaverse

- Teach Flutter and Dart app development to university students, covering state management, UI architecture, and API integration.
- Guide and mentor students through Final Year Projects (FYPs), from planning and architecture to final delivery.
- Translate academic project requirements into practical, buildable app specifications for students of varying skill levels.

PROJECTS

Safe Space Vault

Independent Project

Flutter · Dart · Local Encryption · Android

- Built a privacy-focused, local-only encrypted media vault application for Android with a fully custom in-app media editing suite.
- Implemented multi-layer security including PIN-based access with lockout protection, biometric unlock, and auto-lock on background.
- Designed and optimized an encrypted thumbnail generation and caching pipeline for smooth media browsing performance.

End-to-End Encrypted Messaging App

In Planning / Development

Flutter · WebRTC · Supabase · Firebase Cloud Messaging

- Architected a secure, privacy-first messaging app using peer-to-peer WebRTC communication with a self-hosted TURN relay.
- Designed a scalable, cost-efficient backend strategy combining Supabase and cloud infrastructure with push notification support.

Additional apps and detailed project breakdowns available on my [portfolio](#).
